* Future updates for all or some Tandem products may not be developed and may not be offered everywhere and would be subject to applicable regulatory approvals. Software updates are only available to customers who are in warranty at the time they update their pump. Additional training may be required to access certain software updates. Charges may apply. Tandem may discontinue select software and features over time at its discretion.

† Our mobile apps require a compatible smartphone model and operating system (sold separately). For t:slim X2 insulin pump users bolus delivery also requires an app update, a remote software update on the pump, and additional training. Only available to pump users who reside in the United States.

‡ Continuous glucose monitoring (CGM) sensors sold separately. Tandem Mobi integration with Dexcom G7 is under development. The safety and effectiveness of Dexcom G7 with Tandem Mobi has not yet been established. Tandem Mobi is intended for use with Dexcom G6.
